1. ACKNOWLEDGEMENT

There are many profound personalities whose relentless support and guidance made this syllabus restructuring 2017 a success. We take this opportunity to express our sincere appreciation to all those who were part of this endeavour for restructuring the syllabus of U G course in Physics under Mahatma Gandhi University, Kottayam.

We express profound gratitude to the Honourable Vice-Chancellor, Pro-Vice Chancellor, Registrar, Members of the Syndicate and Academic Council for their sincere co-operation and guidance for completion of this work. We place on record my wholehearted gratitude to the members of Faculty of Science and Board of Studies for their untiring efforts. We also appreciate the efforts of members of University Academic Section and other staff.

Special thanks are due to the representatives of the colleges affiliated to M. G. University, who have actively participated and contributed in the workshops. The enthusiasm and sincerity shown by the teachers from various colleges in the context of syllabus restructuring is highly appreciated.

Prepared by BOS and Faculty of Science,

Kottayam 02-05-2017

2. TITLE

B. Sc. PHYSICS PROGRAMME – Under Graduate Programmes under Choice Based Credit System, 2017 (**UG CBCS 2017**).

3. AIMS AND OBJECTIVES OF THE PROGRAMME

Aims:

The Board of Studies in Physics (UG) recognizes that curriculum, course content and assessment of scholastic achievement play complementary roles in shaping education. The committee is of the view that assessment should support and encourage the broad instructional goals such as basic knowledge of the discipline of Physics including phenomenology, theories and techniques, concepts and general principles. This should also support the ability to ask physical questions and to obtain solutions to physical questions by use of qualitative and quantitative reasoning and by experimental investigation. The important student attributes including appreciation of the physical world and the discipline of Physics, curiosity, creativity and reasoned skepticism and understanding links of Physics to other disciplines and to societal issues should gave encouragement. With this in mind, we aim to provide a firm foundation in every aspect of Physics and to explain a broad spectrum of modern trends in physics and to develop experimental, computational and mathematics skills ofstudents.

The programme also aims to develop the following abilities:

- 1. Read, understand and interpret physical information verbal, mathematical and graphical.
- 2. Impart skills required to gather information from resources and use them.
- To give need based education in physics of the highest quality at the undergraduate level.
- 4. Offer courses to the choice of the students.
- 5. Perform experiments and interpret the results of observation, including making an

assessment of experimental uncertainties.

- 6. Provide an intellectually stimulating environment to develop skills and enthusiasms of students to the best of their potential.
- 7. Use Information Communication Technology to gather knowledge at will.
- 8. Attract outstanding students from all backgrounds.

Objectives:

The syllabi are framed in such a way that it bridges the gap between the plus two and post graduate levels of Physics by providing amore complete and logical framework in almost all areas of basic Physics.

By the end of the first year (2nd semester), the students should have attained a common level in basic mechanics, a secure foundation in mathematics, Chemistry(otherwise specified), Languages and other relevant subjects to complement the core for their future courses and developed their experimental and data analysis skills through experiments at laboratories.

By the end of the second year(4thsemester), the students should have been introduced to powerful tools for tackling a wide range of topics in Optics, Laser, Fiber optics, Semiconductor devices and circuits. Along with Languages, they should have been familiar with additional relevant techniques in mathematics, Chemistry or Electronics/Computer application and developed their experimental and data analysis skills through a wide range of experiments through practical at laboratories.

By the end of the third year (6th semester)r, the students should have developed their understanding of core Physics by covering a range of topics in almost all areas of physics including Classical and Quantum Mechanics, Electricity and Electrodynamics, Relativity and spectroscopy, Thermal and Statistical Physics, Nuclear and Particle physics, Solid State Physics, Digital Electronics etc. along with one choice based courses, Open course and had experience of independent work such as projects; seminars etc. and thereby developing their experimental skills through a series of experiments which also illustrate major themes of the lecture courses.

4. COURSE DESIGN - B. Sc. PROGRAMMES IN PHYSICS

The U.G. programme in Physics must include (a) Common courses, (b) Core courses, (c) Complementary courses, (d) Choice based courses, (e) Open courses and (f) Project. No course shall carry more than 4 credits. The student shall select any one Open course in Semester 5 offered by the various Departments which offers the core courses or physical education department, depending on the availability of infrastructure facilities, in the institution. The number of Courses for the restructured programme should contain 12 compulsory core courses, 1 open course, 1 choice based course from the frontier area of the core courses, 6 core practicals, 1 project in the area of core, 8 complementary courses, 2 complementary practicals otherwise specified, from the relevant subjects for complementing the core of study. There should be 10 common courses, or otherwise specified, which includes the first and second language of study.

5. PROGRAMME STRUCTURE

Programme structure

Model- I B. Sc

А	Programme Duration	6 Semesters
В	Total Credits required for successful completion of the Programme	120
С	Credits required from Common Course I	22
D	Credits required from Common Course II	16
E	Credits required from Core course (including Project) and Complementarycourses	79
F	Open course	3
G	Minimum attendance required	75%

Model- II B. Sc

Α	Programme Duration	6 Semesters
В	Total Credits required for successful completion of the Programme	120
С	Credits required from Common Course I	16
D	Credits required from Common Course II	8
E	Credits required from Core (including Project) + Complementary + Vocational Courses	93
F	Open course	3
G	Minimum attendance required	75%

Model- III B. Sc

А	Programme Duration	6 Semesters
В	Total Credits required for successful completion of the Programme	120
С	Credits required from Common Course I	8
D	Credits required from Core I + Core II + Complementary + Project	109
E	Open course	3
F	Minimum attendance required	75%

Courses:

There shall be three different types (models) of courses in Physics programme. The programme (Model I) consists of common courses with 38 credits, core, Choice based course, Open course & complementary courses with 82 credits. The programme (Vocational -Model II) consists of common courses with 24 credits, core, Choice based courses, Open course & complementary courses with 96 credits. The programme (Model III) consists of common courses with 8 credits, core, Choice based course & complementary courses with 8 credits, core, Choice based course & complementary courses with 112 credits.

The Physics core subject will be the same in all respect in Model-I, Model-II and Model-III. Therefore B.Sc. Physics programme in all these three models will be treated equally for considering higher education in Physics and for Physical Science B.Ed.

Scheme of Courses:

Model- I		Model- II		Model- III		
Courses	No.	Courses	No.	Courses	No.	
Common Courses	10	Common Courses	6	Common Courses	2	
Core Courses	12	Core Courses	12	First Core Courses	12	
Project	1	Project	1	Project	1	
Core Practicals	6	Core Practicals	6	First Core Practicals	6	
Open Course	1	Open Course	1	Open Course	1	
Choice based Course	1	Choice based Course	1	Choice based Course	1	
		Vocational courses	8	Second Core Courses	8	
-		Vocational Practicals	3	Second Core Practicals	3	
		-	-	OJT	2	
Complementary Courses	8	Complementary Courses	4	Complementary Courses	8	
Complementary Practicals	2	-		Complementary Practicals	2	
Total	41	Total	42	Total	46	

The different types of courses and its number are as the following:

Course Code:

Every course is coded using an eight digit alpha numeric code that gives a brief description on the following details.

A. Subject Code (2 characters)

Composed of two characters, which gives a meaningful abbreviation of the subject to which the paper belongs to.

The abbreviations used here are PH – Physics, AE – Applied Electronics, CA – Computer Application, EM – Electronic Equipment Maintenance, and EL - Electronics

B. Semester to which course belongs to (1 digit)

Composed of single digit number which indicates the semester to which the paper belongs to (1to 6). In case of Practicals the number indicates the semester in which the exam in conducted.

C. Course type as per syllabus (2 characters)

Composed of two characters which give meaningful abbreviation of type of the course. The abbreviations used here are CM – Complementary Course, CB – Choice Based Core, CR – Core Course, OJ – On Job Training, PR – Project, OP – Open Course and VO – Vocational Course

D. Whether 'Theory' or 'Practical' or 'Other' (1 character)

Letter 'T' is used to denote Theory papers, the letter 'P' for Practical papers and the letter 'O' to denote other papers like Project, On Job Training, etc.

E. Serial number of the course in continuous series (2 digits)

Composed of two digits to indicate the paper's relative position in the programme. Eg. 01 indicates 1stpaper, 05 indicates 5th paper, etc.

Sample Course Code

The Course code "PH1CRT01" indicates that the paper is "Physics – 1st Semester – Core Course – Theory – 1st paper"

Courses with Credits:

Courses with Credits of different courses and scheme of examinations of the programme

is the following

Model I		Model II		Model III		
Courses	Credits	Total	Credits	Total	Credits	Total
Core Courses	47		47		47	
Open Course	3		3		3	
Choice Based Core	3		3		3	
Project	1		1		1	
Vocational Courses	Nil		28		Nil	
2nd Core Courses	Nil		Nil		30	
Total		54		82		84
Complementary Courses I	14		14		14	
Complementary Courses II	14		Nil		14	
Total		28		14		28
Common Courses	38		24		8	
Total		38		24		8
Grand Total		120		120		120

	Мо	del I	Model II		Mod	el III
Semester	Theory	Practical	Theory	Practical	Theory	Practical
First semester	2	2	6	4	8	4
Second semester	2	2	6	4	6	4
Third semester	3	2	9	6	9	6
Fourth semester	3	2	9	6	9	6
Fifth semester	17	8	17	8	17	8
Sixth Semester	17	8	17	8	17	8

Scheme of Distribution of Instructional hours for Corecourses:

6. MARKS DISTRIBUTION FOR PROJECT AND INDUSTRIAL VISIT

All students are to do a **project in the area of core course.** This project can be done individually or in groups (not more than three students). The projects are to be identified and its work must be started during the V semester of the programme with the help of the supervising teacher. The report of the project in duplicate is to be submitted to the department at the sixth semester and are to be produced before the examiners appointed by the University. External Project evaluation and Viva / Presentation are compulsory for all subjects and will be conducted at the end of the programme.

An industrial visit is also included in the program. The entire student must visit an industry during 5thor 6thsemester and submit a report in duplicate along with the project report. This industrial visit and the report will be evaluated internally and externally along with the project evaluation.

a) Marks of External Examination 80

Components of Evaluation (External)	Marks
Dissertation - Project (External)	45
Viva-Voce- Project(External)	27
Industrial Visit Report	5
Viva-Voce – Industrial Visit	3
Total	80

b) Marks of internal evaluation: 20(All the five components of the internal assessment are mandatory)

Components of Internal Evaluation	Marks
Punctuality	4
Experimentation/Data Collection	5
Knowledge	5
Report	4
Industrial Visit	2
Total	20

c) OJT Evaluation (Internal evaluation: 100 marks)

Components of Internal Evaluation	Marks
Punctuality	20
Knowledge	20
Experimentation	20
Report	25
Presentation & Viva Voce	15
Total	100

8.SYLLABUS CORE PHYSICS

B.Sc. Physics Programme (Model – I, II &III)

Semester-I

Core Course: I

Credit – 2 (36 hours)

(8hours)

PH1CRT01: METHODOLOGY AND PERSPECTIVES OF PHYSICS

Module I

Concepts and Development Physics:

Development of physics in the last century and the birth of new scientific concepts with reference to scientific contributions of Galileo, Newton, Einstein, J J Thomson, Curies, Rayleigh, Max Plank, Heisenberg and Schrodinger (qualitative understanding). Contributions of Indian physicists -C V Raman, H J Babha, J C Bose, S N Bose, M Saha, S Chandrasekhar, Vikram Sarabhai, (Topics in this part require qualitative study only)

References:

- 1. Feynman lectures of Physics
- 2. Concepts of Modern Physics: ArtherBeisser,
- 3. Modern Physics: Kenneth Krane
- 4. Modern Physics: R Murugeshan
- 5. https://www.nobelprize.org/nobel_prizes/physics/laureates/

Module II

(18 hours)

Number systems- Decimal, hexadecimal and Binary.Conversions, Binary arithmetic addition, subtraction and multiplication. 1's and 2's complement subtraction –signed binary numbers. Signed binary arithmetic, BCD code, ASCII code, Significance of binary number system in digital electronics, microprocessors and in computers,

Introductory Vector Analysis - Applications of vectors in Physics. Differential and integral vector calculus: – The operator ∇ - physical significance of Gradient, Divergence and Curl, Line integral, surface integral and volume integral of vectors

Co-ordinate systems:Cartesian Co-ordinate system, plane polar and spherical polar coordinates, cylindricalcoordinates (Basic ideas with examples in physics),

References:

- Introduction to Electrodynamics, David J. Griffiths, Prentice Hall India Pvt. Ltd., Chapter 1
- 7. Mathematical Physics: Charlie Harper
- 8. University Physics, Roger A Freedman, Hugh D Young 14th edition
- 9. Digital electronics: Albert Paul Malvino
- 10. Digital logic and computer design M. Morris Mano, PHI.

Module III

Experimental methods and error analysis

(10 hrs)

Experimental methods, least count of instruments, Instruments for measuring masscommon balance; length-vernier, screw gauge, travelling microscope, and sonar; timependulum clock and atomic clock; angle- spectrometer and stellar parallax; currentammeter and conversion of galvanometer to ammeter; voltage- voltmeter and conversion of galvanometer to voltmeter. Fundamental units. Precision and accuracy of measurements, source of error in measurements, necessity of estimating errors, types of errors, reading error of instrument, calibration error, random error, systematic error, significant digits, order of magnitude and rounding of numbers, rounding error, absolute and relative errors, Errors of computation- addition, subtraction, multiplication, division, error in power and roots, Propagation of errors, analysis of data, standard deviation, calculation of mean value.

References:

- 1. Text book: Advanced course in Practical Physics by D Chattopadhyay- Chapter-1
- 2. Practical Physics, G L Squires, Third edn. Cambridge University Press.

3. The theory of Errors in Physical Measurements- J C Pal- New Central Book Agency- 2010

Semester-II

Core Course: II

PH2CRT02: MECHANICS AND PROPERTIES OF MATTER

Module I

Wave motion

General equation of wave motion, plane progressive harmonic wave, energy density, intensity of a wave, superposition of waves, beats, transverse waves in stretched strings, modes.

Text Book: Mechanics by D.S. Mathur – Chapter 9.

Oscillations

Periodic motion, simple harmonic motion and harmonic oscillator, energy of a harmonic oscillator, examples of harmonic oscillator – simple and compound pendulum. Theory of Damped harmonic oscillator. Theory of forced oscillator, resonance, applications.

Text Book: Mechanics by D.S. Mathur – Chapter 7, 8.

Module -II

Rotational mechanics (7 Hours)

Angular velocity- angular acceleration- angular momentum- conservation- torque-moment of inertia- Parallel and perpendicular axes theorems - calculation of moment of inertia-(rod, ring, disc, cylinder, and sphere). Theory of flywheel.

Text Book: Mechanics by D.S. Mathur – Chapter 10.

Module III

Elasticity

Curriculum and syllabus 2017 admissions onwards

Credit - 2(36 hours)

(8 hours)

(4 hours)

(10 hours)

Basic ideas on elasticity – Young's modulus, bulk modulus, rigidity modulus, Poisson's ratio, relations connecting various elastic constants.Work done per unit volume in a strain. Bending of beams, bending moment, flexural rigidity.Young's modulus – uniform and non-uniform bending, cantilever.I –section girders. Determination of rigidity modulus using Static and Dynamic methods.

Text Book: Mechanics by D.S. Mathur – Chapter 12, 13.

Hydrodynamics

(7 hours)

Streamline and turbulent flows, coefficient of Viscosity – Determination of viscosity by Poiseuille's method. Equation of continuity, energy possessed by a liquid, Bernoulli's theorem.

Surface tension, surface energy, excess pressure in a liquid drop and bubble, factors affecting surface tension, applications.

Text Book: Mechanics by D.S. Mathur – Chapter 14.

Text books:

- 1. Mechanics by J.C. Upadhayaya, Ramprasad Pub.
- 2. Mechanics -D.S.Mathur, S.Chand.
- 3. Advanced course in Practical Physics by D Chattopadhyay, Central Book
- 4. Properties of Matter and Acoustics by Murugeshan and K. Sivaprasath, S. Chand

References:

- 1. Mechanics- Hans and Puri, TMH
- 2. Classical Mechanics by J.C. Upadhyaya, Himalaya Pub.
- 3. Classical Mechanics-Takwale and Puranik, TMH.
- 4. Classical mechanics- K.SankaraRao, PHI.
- 5. Properties of Matter by Mathur, S. Chand,
- 6. Mechanics by Somnath Datta, Pearson
- 7. Mechanics by H.D Young and R.A Freedman, Pearson.

Semester-III

Core Course: III

PH3CRT03: OPTICS, LASER AND FIBER OPTICS

Module I

Interference

Review of basic ideas of interference- Coherent waves-Optical path and phase changesuperposition of waves-theory of interference-intensity distribution. Young's double slit experiment, Coherence-Conditions for interference.

Thin films-plane parallel film- interference due to reflected light-conditions for brightness and darkness-interference due to transmitted light- Haidinger fringes- interference in wedge shaped film- colours in thin films-Newton's rings-applications. Michelson interferometer- construction and working.

Text book: Optics by N.Subramanayam, Brijlal, M.N.Avadhanulu-Chapter 14 and 15.

Module II

Diffraction

Fresnel Diffraction – Huygens- Fresnel theory –zone plate –Difference between zone plate and convex lens. Comparison between interference and diffraction –diffraction pattern due to a straight edge, single silt. Fraunhoffer diffraction at a single slit, double slit,N slits, theory of plane transmission grating. Dispersive power and resolving power of grating.

Text book: Optics by N.Subramanayam, Brijlal, M.N.Avadhanulu-Chapter 17, 18 and 19.

Polarization

Concept of polarization – plane of polarization- Types of polarized light-production of plane polarized light by reflection-refraction. Malu's law-Polarization by double refraction-calcite crystal. Anisotropic crystals-optic axis-Double refraction-Huygens explanation of double refraction. Retarders - Quarter wave plate and Half wave plate. Production and Detection of plane, elliptically and circularly polarized light-Optical Activity- specific rotation.

Text book: Optics by N.Subramanayam, Brijlal, M.N.Avadhanulu-Chapter 20.

Curriculum and syllabus 2017 admissions onwards

Credit – 3(54 hours)

(10 hours)

(12hours)

(13 hours)

Module III

Laser

(10 hours)

Absorption and emission of light- Absorption- spontaneous emission and stimulated emission, Einstein relations, Population inversion- Active medium-Pumping, different pumping methods, Resonators – plane mirror and confocal resonators – Metastable state, Three level and Four level Laser systems. Ruby Laser, He-Ne laser, Semiconductor Laser, Laser beam Characteristics, coherence. Applications of Laser.

Text book: Optics by N.Subramanayam, Brijlal, M.N.Avadhanulu-Chapter 22 and 23.

Fiber Optics (9 hours)

Propagation of light in a fiber -acceptance angle, numerical aperture, V-number, single mode and multimode step index fiber –graded index fiber- attenuation- application of fiber-optical fiber communication – advantages.

Text book: Semiconductor physics and optoelectronics- V.Rajendran, J.Hemaletha and M.S.M.Gibson, Unit IV-Chapter 1.

References

- 1. Optics, E Hecht and AR Ganesan, Pearson
- 2. Optics, 3rd edition, AjoyGhatak, TMH
- 3. Optical Electronics, AjoyGhatak and K Thyagarajan, Cambridge
- 4. Optics and Atomic Physics, D P Khandelwal, Himalaya Pub. House
- 5. Optics, S K Srivastava, CBS Pub. N Delhi
- 6. A Text book of Optics, S L Kakani, K L Bhandari, S Chand.
- 7. Optics N.Subramanayam, Brijlal, M.N Avadhanulu S Chand.
- 8. Semiconductor optoelectronic devices: Pallab Bhattacharya, PHI 2009.
- 9. Lasers and Non linear Optics, BB Laud, New Age Int Pub. 2013
- 10. Laser Fundamentals, William T Silfvast, Cambridge Univ Press. 2012.
- 11. Optoelectronics an Introduction, J Wilson & JFB Hawkes, PHI 1999.
- 12. Fiber Optics and Optoelectronics, R P Khare, Oxford 2012..
- 13. Introduction to Optics, Frank L Pedrotti, Leno M Pedrotti& Leno S Pefrotti, Pearson 2014.
- 14. Optical fiber and fiber optic communication system (4th edition) Subir Kumar Sarkar, S Chand.
Core Course: IV

Credit – 3 (54 hours)

PH4CRT04: SEMICONDUCTOR PHYSICS

Module I

Semiconducting diodes and applications

PN Junction, Depletion layer, Barrier potential, Biasing- forward and reverse, Reverse breakdown, Junction capacitance and diffusion capacitance- PN Junction diode – V-I characteristics–Diode parameters, Diode current Equation, Diode testing, Ideal diode. Zener diode and its reverse characteristics.Thermistors.

Rectification - Half wave, Full wave, Centre tapped, Bridge rectifier circuits - Nature of rectified output, Efficiency & Ripple factor-Filter circuits – Inductor Filter, Capacitor Filter, LC Filter, π Filter-Regulated Power supplies - Zener diode voltage regulator-Voltage multipliers – Doubler & Tripler- Wave shaping circuits - Clipper-Positive, negative and biased – Clampers- Positive, negative and biased.

Text Book: Basic Electronics- B.L. Theraja Chapters 13, 14, 15, 17

A Text Book of Applied Electronics- R.S.Sedha Chapters-11, 12, 19, 20, 33

Module II

Transistors Configurations and Feed back(12 hours)

Bipolar junction transistors, Transistor biasing, CB, CC, CE configurations and their characteristics- Active, saturation and cut-off regions. Current gain α , β , γ and their relationships. Leakage currents- Thermal runaway. DC operating point and AC and DC Load line, Q-Point.

Basic principles of feedback, positive & negative feedback, Advantages of negative feedback, negative feedback circuits – voltage series & shunt, current series & shunt.

(12 hours)

Amplifiers and Oscillators

Need for biasing-Stabilization- Voltage divider bias. Single stage transistor Amplifiers-CE amplifier - amplification factors. Decibel system, Variations in Amplifier gain with frequency.

Oscillatory Circuits, LC oscillators – Hartley Oscillator, Colpit's Oscillator, RC oscillators - Phase shift Oscillator. Astable and monostable multivibrator (basic idea only)

Text Book: Basic Electronics-B.L. Theraja-Chapters 18, 19, 20, 22, 24, 25, 28, 29.

Curriculum and syllabus 2017 admissions onwards

(14 hours)

A Text Book of Applied Electronics-R.S.Sedha Chapters 14, 15, 22,24, 29, 31, 32

Module III

FET, Operational Amplifier & Modulation

FET -characteristics, FET- Parameters. Comparison between FET and BJT.

OP-amp- Symbol and terminals. Characteristics of ideal OP-amp, CMRR, Applications - inverting, Non-inverting, Unity follower and Summing amplifiers.

Types of modulation – AM, FM, Pulse modulation and Phase modulation (qualitative study only). Amplitude modulation- modulation index - Analysis of AM wave – Sidebands –bandwidth- AM Demodulation.

Text Book: Basic Electronics-B. L. Theraja - Chapters 26, 30, 31

A Text Book of Applied Electronics-R.S.Sedha-Chapter-16, 35

References:

- 1. Principles of electronics, VK Mehta, S Chand
- 2. Basic Electronics(7thEdition), Malvino and Bates, TMH
- 3. Electronics Fundamentals and Applications- D. Chattopadhyay and P.G.Rakshit, New Age International Publishers.
- 4. Electronics: Fundamentals of Analog circuits, Thomas L. Floyd, David Buchla, Prentice Hall
- 5. Electronic Devices and Circuit Theory, Robert Boylestad, Louis Nashelsky, Prentice Hall
- 6. Basic Electronics, Debashis De , Pearson 2010
- 7. Basic Electronics, Santiram Kal, PHI 2010

(16 hours)

Core Course: V

PH5CRT05: ELECTRICITY AND ELECTRODYNAMICS

Module I

Alternating Current and Network Theorems

EMF induced in a coil rotating in a magnetic field - AC applied to resistive, inductive and capacitance circuits - AC applied to LR and RC circuits - Analysis of LCR series circuits - LCR parallel resonant circuit – comparison - Power in ac circuits - Wattless current - choke coil - transformer on no load- skin effect.

Ideal voltage source and current source - Superposition theorem - Reciprocity theorem - Thevenin's theorem - Norton's theorem - Maximum power transfer theorem.

Text Book: Electricity and Magnetism, R. Murugeshan- Chapters 13, 30 and 18

Module II

Transient Current and Thermo electricity

Growth and decay of current in an LR circuit- Charging and discharging of a capacitor through a resistor - Growth and decay of charge in an LCR circuit.

Seebeck effect - Laws of thermo emf - Peltier effect- Thomson effect- Thermoelectric diagrams -Thermocouple (qualitative study) - Explanation of thermoelectric effects based on electron theory.

Text Book: Electricity and Magnetism, R. Murugeshan- Chapters 12, 8 and 32.

Module III

Electrostatics and Magnetostatics

Fundamental theorems of divergence and curl (physical concepts) - Electric field - Continuous charge distribution- Divergence and curl of electrostatic field- Gauss's law and applications: solid sphere, infinite wire, infinite plane sheet - Electric potential - Poisson's and Laplace's equations - Potential of a localized charge distribution – Electrostatic boundary conditions- work and energy in electrostatics – The work done to

Curriculum and syllabus 2017 admissions onwards

39

(15 hours)

Credit – 3 (54 hours)

(8 hours)

(20 hours)

move a charge – Energy of a point charge distribution and continuous charge distribution-Basic properties a conductor .

Lorentz Force law- Biot- Savart law- Divergence and curl of B- Applications of Amperes' law: long straight wire, infinite plane, solenoid – Comparison of electrostatics and magnetostatics- Magnetic vector potential – Magnetostatics boundary conditions

Electromagnetic induction- Faraday's law

Text Book:Introduction to Electrodynamics, David J Griffiths, Chapters 1, 2, 5 and 7

Module IV

Maxwell's Equations and Electromagnetic wave propagation (11 hours)

Maxwell's equations - Boundary conditions for free space - Continuity equations-Poynting's theorem

Wave equations (general idea on reflection at boundary and polarization) - Electromagnetic wave in vacuum - Wave equation for E and B - Monochromatic plane waves- Energy of electromagnetic waves

Text Book: Introduction to Electrodynamics, David J Griffiths-Chapters 7,8 and 9

References:

- 1. Fundamentals of Magnetism and Electricity, D.N Vasudeva S Chand
- 2. Principles of Electromagnetics, Mathew N.O Sadiku- 4th Ed., Oxford
- 3. Electricity and Magnetism, KK Tewari- S Chand
- 4. Electricity and Electronics, Saxena, Arora and Prakash- Pragati Prakashan
- 5. Classical Electromagnetism, Jerrold Franklin- Pearson
- 6. Electromagnetic Fields and Waves, KD Prasad- Satya Prakashan
- 7. Field and wave Electromagnetics, David K Cheng- Pearson.

Core Course:VI

Credit – 3 (54 hours)

PH5CRT06: CLASSICAL AND QUANTUM MECHANICS

Module I

Lagrangian and Hamiltonian Formulations of Classical Mechanics (15 hours)

Constraints, degrees of freedom, generalized co-ordinates, principle of virtual work, D'Alembert's principle, Lagrange's equations(no derivation required), Application of Lagrangian (Linear Harmonic oscillator, Planetary motion and Simple Pendulum only), Hamilton's Canonical equations of motion, Advantages of Hamilton's method, Applications of Hamilton's method (Linear Harmonic oscillator and Simple pendulum only).Hamilton's Principle. Derivation of Lagrange's equation from Hamilton's Principle.

Text book: Classical Mechanics by J.C. Upadhyaya-Chapter 2 & 3.

Classical Mechanics by G. Aruldhas

Module II

Historical development and origin of quantum theory (12 hours)

Failure of classical physics- Black Body radiation-Planck's radiation law, Photoelectric effect-Einstein's explanation, Compton effect, Bohr's correspondence principle-Wave particle Dualism, Dual nature of matter- De Broglie hypothesis, Davisson-Germer Experiment, De Broglie waves, Wave packet, Group and phase velocities

Text Book: A Textbook of Quantum Mechanics- G Aruldhas-Chapter 1

General Formalism of Quantum Mechanics

(12 hours)

Eigen functions and eigen values- Hermitian operator- Postulates of Quantum Mechanics- wave function, Operators, Expectation value, uncertainty relation (Position, momentum uncertainty).

Text Book: A Textbook of Quantum Mechanics- G Aruldhas-Chapter 3 and 8

Module III

Schrödinger equation and its applications

Time dependent Schrödinger equation- interpretation of wave function, Probability density, Probability current density, Ehrenfest theorem- Extension to three dimensions-Time independent Schrödinger equation- Stationary states- Admissibility conditions of wave function-general properties of one dimensional Schrödinger equation, particle in a box, orthogonality of wave function.

Text Book: A Textbook of Quantum Mechanics- G Aruldhas.

Text Book:

- 1. Classical Mechanics by J.C. Upadhyaya. Himalaya Pub.
- 2. Concepts of Modern Physics- Arthur Beiser, TMH

References:

- 1. Concepts of Modern Physics- Arthur Beiser, TMH
- 2. A Textbook of Quantum Mechanics- G Aruldhas- (2nd Edition)- PHI
- 3. Classical Mechanics-Takwale and Puranik, TMH.
- 4. Classical mechanics- K.SankaraRao, PHI.
- 5. Introductory Quantum Mechanics- RI Liboff, Pearson
- 6. Quantum Physics- Gasiorowicz, John Wiely
- 7. Quantum Mechanics- Griffith, Pearson

(15 hours)

Core Course: VII

PH5CRT07: DIGITAL ELECTRONICS AND PROGRAMMING

Module I

Boolean algebra and logic gates

Basic gates NOT, OR, AND. Universal Logic Gates- NOR, NAND.XOR and XNOR Gates.Rules and Laws of Boolean algebra.Duality theorem -De Morgan's Theorems, analysis and simplification of logic circuits. Boolean equation and truth table - SOP and POS.Minterms and Maxterms. Standard SOP and Standard POS- Conversion between Standard SOP & Standard POS. Karnaugh Map (up to four variables). K map SOP minimization.

Module II

Combinational logic

Half Adder Full Adder. Half Full and and subtractor. 4-bit parallel Adder/Subtractor.Multiplexer, De-multiplexer, Encoder & Decoder.

Sequential logic

Flip-flops, RS, Clocked RS, Master Slave JK FF, DFF, T Flip-flop, Buffer registers- Shift register-SISO and SIPO, Counters- Binary ripple counter. D/A converters (Ladder type), A/D Converter (Counter type).

Module III

Programming in C++

Basic C++ program structure -comments-data types-variable types-constantsoperators(arithmetic, relational, logical and assignment operators)- if, if-else and else if, do while - case - loops(while, do-while, and for)-nested loops- arrays(Defining Arrays, Accessing Array Elements, Initializing Arrays)- basic ideas of functions(qualitative idea), object and classes. Programs using loops.

Text book: Object oriented programming in Turbo C++ - Robert Lafore (Galgotia Pub.) Chapter 2, 3 and 7.

Curriculum and syllabus 2017 admissions onwards

(26 hours)

(13 hours)

(9 hours)

(6 hours)

Credit-3 (54 hours)

Text books:

- 1. Digital fundamentals, Thomas L. Floyed (10th edition), Pearson
- 2. Digital principles and applications, Malvino, Leach and Saha (6th Edition) TMH

Core Course: VIII

Credit-4 (72 hours)

PH5CRT08: ENVIRONMENTAL PHYSICS AND HUMAN RIGHTS

Vision

The importance of environmental science and environmental studies cannot be disputed. The need for sustainable development is a key to the future of mankind. Continuing problems of pollution, solid waste disposal, degradation of environment, issues like economic productivity and national security, Global warming, the depletion of ozone layer and loss of biodiversity have made everyone aware of environmental issues. The United Nations Conference on Environment and Development held in Rio de Janerio in 1992 and World Summit on Sustainable Development at Johannesburg in 2002 have drawn the attention of people around the globe to the deteriorating condition of our environment. It is clear that no citizen of the earth can afford to be ignorant of environment issues.

India is rich in biodiversity which provides various resources for people. Only about 1.7 million living organisms have been described and named globally. Still many more remain to be identified and described. Attempts are made to conserve them in ex-situ and in-situ situations. Intellectual property rights (IPRs) have become important in a biodiversity-rich country like India to protect microbes, plants and animals that have useful genetic properties. Destruction of habitats, over-use of energy resource and environmental pollution has been found to be responsible for the loss of a large number of life-forms. It is feared that a large proportion of life on earth may get wiped out in the near future.

In spite of the deteriorating status of the environment, study of environment has so far not received adequate attention in our academic programme. Recognizing this, the Hon'ble Supreme Court directed the UGC to introduce a basic course on environment at every level in college education. Accordingly, the matter was considered by UGC and it was decided that a six months compulsory core module course in environmental studies may be prepared and compulsorily implemented in all the University/Colleges of India.

The syllabus of environmental studies includes five modules including human rights. The first two modules are purely environmental studies according to the UGC directions. The second two modules are strictly related with the core subject and fifth module is for human rights.

Objectives

- Environmental Education encourages students to research, investigate how and why things happen, and make their own decisions about complex environmental issues by developing and enhancing critical and creative thinking skills. It helps to foster a new generation of informed consumers, workers, as well as policy or decision makers.
- Environmental Education helps students to understand how their decisions and actions affect the environment, builds knowledge and skills necessary to address complex environmental issues, as well as ways we can take action to keep our environment healthy and sustainable for the future. It encourages character building, and develops positive attitudes and values.

Curriculum and syllabus 2017 admissions onwards

- To develop the sense of awareness among the students about the environment and its various problems and to help the students in realizing the inter-relationship between man and environment and helps to protect the nature and natural resources.
- To help the students in acquiring the basic knowledge about environment and the social norms that provides unity with environmental characteristics and create positive attitude about the environment.

Module I (15 Hours)

Water Resources and Its Management (3 Hours)

Water resources: Use and over-utilization of surface and ground water, floods, drought, damsbenefits and problems. Water harvesting-Importance of rain water harvesting in Kerala.

Remote sensing (3 Hours)

Remote sensing-principles, spectral reflectance of earth's surface features, Remote sensing satellites and sensors, aerial photography, Applications of Remote Sensing in environmental monitoring and assessment.

Environmental Pollution (9 Hours)

Environment and human health; Environmental pollution- Primary and secondary pollutants; Air pollution- Sources, Effects and Control/Treatment methods; Acid Rain; Ozone layer depletion; Green house gases; Global warming - Climatic effects; Water pollution- Sources, Effects and Control/Treatment methods; Groundwater pollution; Marine pollution; Soil pollution; Noise pollution- Sources and measurement indices of noise pollution, Noise exposure level and standards, Noise control measures, Impact of noise on human health, ; Environmental pollution due to environmental disasters; Consumerism and waste products; E-waste-an emerging environmental threat. Disaster management: floods, earthquake, cyclone and landslides.

Module II (12 Hours)

Waste Management (8Hours)

Waste minimization and resource conservation:- Source reduction, Recycling, Value-added products; Waste minimization promotional methods- awareness generation, control methods and economic benefits; Benefits of waste minimization; Management of solid wastes- Municipal solid wastes, Hazardous solid waste-characteristics and management of HSW, Waste treatment and disposal methods- physical, biological and chemical process.

Environment Impact Assessment and Control (4 Hours)

Basic ideas of environment impact assessment; Environment ethics; Environmental laws and constitutional provisions to control pollutions in India-The general acts; Air (prevention and control

Curriculum and syllabus 2017 admissions onwards

of pollution) act; Water (prevention and control of pollution) act; Wild life protection act; Forest conservation act; Environment protection acts.

Module III (13 Hours)

Non-renewable and Renewable Energy Sources (13 Hours)

Non-renewable energy sources:-Coal, Oil, Natural gas; Nuclear fission energy; Merits and demerits of non-renewable energy.

Renewable energy sources: Biomass energy- Biofuels, Biogas plant - Fixed dome type and moving drum type; Wind energy; Wave energy; Tidal energy; Hydroelectricity; Geothermal energy conversion; Ocean thermal energy conversion; Fusion energy; Hydrogen energy- Production and storage; Merits and demerits of each renewable energy sources; Storage of intermittently generated renewable energy.

Module IV (14 Hours)

Solar energy (14 Hours)

Sun as a source of energy- Solar radiation, Solar Constant, Spectral distribution; Solar pond -Convective and salt gradient types; Flat plate collector; Solar water heater - Direct and indirect systems- Passive and active systems; Optical concentrator - Parabolic trough reflector - Mirror strip reflector - Fresnel lens collector; Solar desalination; Solar dryer - Direct and indirect type; Solar cooker; Solar heating of buildings; Solar green houses; Need and characteristics of photovoltaic (PV) systems; Solar cells - Principle, Equivalent circuits, V-I characteristics, fill factor, conversion efficiency; PV Sun tracking systems; Merits and demerits of solar energy.

Module - V (18 Hours)

Unit 1 - Human Rights

An Introduction to Human Rights, Meaning, concept and development –History of Human Rights-Different Generations of Human Rights- Universality of Human Rights- Basic International Human Rights Documents - UDHR, ICCPR, ICESCR.-Value dimensions of Human Rights

Unit 2 - Human Rights and United Nations

Human Rights co-ordination within UN system- Role of UN secretariat- The Economic and Social Council- The Commission Human Rights-The Security Council and Human rights- The Committee on the Elimination of Racial Discrimination- The Committee on the Elimination of Discrimination Against Women- the Committee on Economic, Social and Cultural Rights- The Human Rights Committee- Critical Appraisal of UN Human Rights Regime.

Unit 3- Human Rights National Perspective Human Rights in Indian Constitution – Fundamental Rights- The Constitutional Context of Human

Curriculum and syllabus 2017 admissions onwards

Rights-directive Principles of State Policy and Human Rights- Human Rights of Women-children – minorities- Prisoners- Science Technology and Human Rights- National Human Rights Commission- State Human Rights Commission- Human Rights Awareness in Education.

OPEN COURSE:

PH5OPT01: Our Universe

Scope: To help the students to comprehend the cosmos and its origin and to developscientific attitude and aptitude.

Prerequisites: This course in intended for the students of other disciplines. So asecondary level knowledge of mathematics and physics is enough to study this course. But an inquisitive mind and curiosity are essential from the part of a student.

Module I

Our universe

Early models of universe- Geo centric model- Ptolemy-Aristotle. Copernican model - Sun at the centre.Galileo and his observations. Planetary paths-Kepler's laws(**No need of derivation**).

Galaxies-Hubble's classification – Spiral, elliptical & irregular galaxies. Milky way galaxy (qualitative).

Module II

Cosmology

Origin of the universe - Big bang theory – expansion of the universe – Hubble's law, age of the universe. Doppler effect and red shift(**qualitative**).

Stellar evolution – birth - red giant- death of a star. White dwarf- Chandrasekhar limit. Super novae- neutron star- black hole.

Text Books

- 1. Architecture of the universe. (cha 3,4,8 and 9) Necia H.Apfel and Allen Hynek-Benjamin Cummins Publishing Company.
- 2. Astronomy A Beginners guide to the universe sixth edition(Ch.12)-Chaisson Mc Millan
- 3. Cosmic vistas-A popular history of astronomy(chap 4,5,6,7,8) Biman Basu-national book trust,India

Curriculum and syllabus 2017 admissions onwards

Credit-3 (72hours)

(14 hours)

(10 hours)

- 4. Astronomy; A Self Teaching Guide (cha 5&6)-Dinah L Moche
- 5. The Great Universe (cha 4,5,6,7) G.K Sasidharan-S.Chand

Module III

Observational Astronomy

Celestial sphere- cardinal points, celestial equator, ecliptic, equinoxes.Celestial coordinate systems-equatorial co-ordinate system-Right ascension & declination, Ecliptic and galactic co-ordinate systems. Diurnal motion of sun - Summer solstice and winter solstice. Time - apparent and mean solar time, International date line. Constellationszodiacal constellations. Astronomical distance scales – AU, Parsec and light year. Stellar Parallax and distance to stars from parallax.

Optical Telescopes - Light gathering power, visual angle, angular magnification, Types of telescopes-refracting and reflecting – Newtonian and Cassegrain telescopes **(No need ofderivation of magnification)**. HST, Radio telescopes, GMRT (India).

Text Books:

- 1. Astronomy A beginner's guide to the universe sixth edition(ch-1)-Chaisson Mc Millan
- 2. Astrophysics stars and galaxies (chap 2,4,20)K D Abhayankar
- 3. Joy of Star watching (ch- 3, 8 &10)- Biman Basu- National Book Trust, India
- 4. A textbook of Optics(ch-10) N.Subrahmanyan, Brijlal and M.N Avadhanulu
- 5. Astronomy; A Self Teaching Guide (cha 2&3)-Dinah L Moche
- 6. www.gmrt.ncra.tifr.in

Module IV

Solar system

(24 hours)

The sun- solar atmosphere - Photosphere, chromospheres and corona.Sun spots.Definition of a planet- terrestrial planets & Jovian planets, Comparison of planets.Minor members of solar system- Asteroids, comets, meteors.

Universal law of gravitation.Earth's orbital motion-day to day changes-seasonal changes.

Text Books:

- 1. Architecture of the Universe (**ch** 2, 14, 15, 17, 18, 19, 20)- Necia H. Apfel & Allen Hynek- The Benjamin Cummings publishing company, Inc.
- 2. Astronomy A beginner's guide to the universe sixth edition(ch-1)-Chaisson Mc Millan
- 3. Astronomy; A Self Teaching Guide (cha 4,9,10,11)-Dinah L Moche
- 4. The great Universe G.K Sasidharan-S.Chand

(24 hours)

Open Course:

Credits-3 (72 Hrs)

PH5OPT02: Physics in Daily Life

Module I

Unit 1

(8 hours)

(12 Hours)

(12 Hours)

10 Hours)

Fundamental and derived quantities. Units and dimensions, dimensional analysis, order of magnitude, significant figures, errors.

Unit 2 Light

Reflection, refraction, diffraction, interference, scattering(elementary ideas only) – examples from daily life – apparent depth, blue color of sky, twinkling of stars.

Total internal reflection, mirage, sparkling of diamond, primary and secondary rainbow – optical fibers. Concave and convex mirrors, lenses – focal length, power of a lens, refractive index, prism, dispersion. Human eye, defects of the eye – myopia, hypermetropia, presbyopia and astigmatism and their correction by lens.

Module II

Unit 3 Motion

Velocity, acceleration, momentum, Idea of inertia, force - laws of motion. Newton's law of gravitation, acceleration due to gravity, mass and weight, apparent weight, weightlessness.

Rotational motion, Moment of inertia, torque, centripetal and centrifugal accelerationexamples- banking of curves, centrifugal pump, roller coasters.

Unit 4 Electricity

Voltage and current, ohms law. Electric energy, electric power, calculation of energy requirement of electric appliances – transformer, generator, hydroelectric power generation – wind power – solar power – nuclear power

Module III

Unit 5 Matter and energy

Different phases of matter, fluids - surface tension, viscosity- capillary rise, Bernoulli's theorem and applications.

Heat energy, temperature, different temperature scales – degree Celsius, Fahrenheit and Kelvin.

Waves - transverse and longitudinal waves, sound waves, Doppler Effect.

Lasers, fluorescence, phosphorescence, electromagnetic waves – applications – microwave oven, radar, super conductivity.

Unit 6 Universe

(12 hours)

Planets, – solar system, moon- faces of moon, lunar and solar eclipses, constellations, Different types of stars, Galaxies, black hole. Satellites, Artificial satellites, Global positioning system. Geo stationary satellite.

Reference Texts

- 1. Fundamentals of Physics with Applications by Arthur Beiser
- 2. Conceptual Physics by Paul G Hewitt

(18 Hours)

OPEN COURSE:

PH5OPT03: COMPUTER HARDWARE AND NETWORKING

Module I

Microprocessors – Basic concepts of Intel 80186, 80286, 80386, 80486 and Pentium processors. Motherboard, Expansion buses, Memory, upgrading / adding memory, BIOS Motherboard – removing, installing / configuring motherboards, BIOS set up, troubleshooting memory.

Module II

Data storage devices, IDE and SCSI controllers, hard disk, installing / upgrading CD ROM drives, DVD, Optical storage, Tape back – ups. Printers, Keyboards, pointing and positioning devices, digital camera, Scanners, Monitors, Hard disks- installing / upgrading, troubleshooting, formatting, Error codes, BIOS disk routines

MODULE III

Multimedia, Graphical accelerators, audio, modems, I/E add on, Networks, Power supplies, UPS

Printer installation, Software installation – DOS, Windows 95, 98, Linux, WindowsNT – installation,

Administration, Installing PASCAL, C, ORACLE, VISUAL BASIC, Software diagnostics -

PC tools, Norton utilities, XT/AT diagnostics, Viruses and anti-viruses.

References:

- 1. IBM PC and CLONES- Hardware, troubleshooting and maintenance – B Govindarajalu
- 2. PC Hardware, a beginners guide Ron Gilster
- 3. All about Motherboard: Manahar Lotia, Pradeep Nair

Curriculum and syllabus 2017 admissions onwards

Credit-3 (72hours)

(24 hours)

(24 hours)

53

(24 hours)

Core Course: IX

PH6CRT09: THERMAL AND STATISTICAL PHYSICS

Module I

Equation of state for gases

Equation of an ideal gas, behavior of real gases, Andrew's experiment on carbon dioxide, critical state, two phase region, intermolecular forces, van der Waals equation of state, van der Waals isotherms, critical constants, limitation of van der Waals equation.

Zeroth law of thermodynamics

Thermodynamic system, surroundings, variables, thermal equilibrium: zeroth law, thermodynamic equilibrium, thermodynamic processes, reversible and irreversible processes, equation of state, expansivity and compressibility.

First laws of thermodynamics

Internal energy, heat, work, cyclic processes, first law, heat capacity, energy equation and difference of specific heat capacities, indicator diagram work done in reversible isothermal expansion of ideal gas, work done in reversible adiabatic expansion of ideal gas.

Heat engines and second law of thermodynamics (

Second law statements, heat engine, efficiency, Carnot's ideal heat engine, work done by the engine per cycle, reversibility, Carnot refrigerator, heat pump, Carnot theorem, absolute scale of temperature, Clausius- Clapeyron latent heat equation.

Text Book: Thermal and Statistical Physics, R.B. Singh, part-1 chapter 3, 4, 5 and6

Module II

Entropy

Definition of entropy, principle of increase of entropy, entropy and unavailable energy, change in entropy in heat conduction, change in entropy in reversible and irreversible process, efficiency of Carnot cycle from TS diagram, entropy of an ideal gas, entropy and disorder.

Credit-3 (54 hours)

(4 hours)

(7 hours)

(5 hours)

(5 hours)

(5 hours)

Thermodynamic relations

Maxwell's thermodynamic relations, TdS equations, energy equation, heat capacity equations, thermodynamic functions, third law of thermodynamics.

Conduction and radiation

Conduction, thermal conductivity, thermal conductivity of bad conductor Lee's disc experiment -thermal resistance, thermal radiation and its properties, fundamental definitions of energy flux, intensity and radiant emittance, Stefan's law, Stefan-Boltzmann law.

Text Book: Thermal and Statistical Physics, R.B. Singh, part-1 chapter7,8,10 and 11.

Module III

Statistical mechanics

Microstates and macrostates, Phase space, density of states, mu space and Gamma space, principle of equal a priori probability, ergodic hypothesis, statistical equilibrium, ensemble, ensemble formulation of statistical mechanics, microcanonical, canonical and grand canonical ensemble, partition function, average energy of particle, equipartition theorem.

Statistical distributions

Maxwell Boltzmann, Fermi-Dirac and Bose-Einstein statistics, distribution laws, Maxwell-Boltzmann, Fermi-Dirac and Bose-Einstein distribution.

Text Book: Thermal and Statistical Physics, R.B. Singh, part-2, Chapters 2, 3,4 and 5.

Text Book:

1. Thermal and Statistical Physics, R.B. Singh, New Age Pub. (2010)

References:

- 4. Thermodynamics and Statistical physics Brij Lal, N.Subrahmanyam and P S Hemne (S. Chand &Co, Multi colour edition 2007).
- 5. Berkeley Physics Course Volume 5; Statistical Physics; Frederick Reif. McGraw Hill.
- 6. Statistical Mechanics, R.K. Pathria, Pergamon press, Oxford

Curriculum and syllabus 2017 admissions onwards

(8hours)

(8 hours)

(8 hours)

(4 hours)

55

Core Course: X

PH6CRT10: RELATIVITY AND SPECTROSCOPY

Module I

Special Theory of Relativity

Inertial and non inertial frames of reference- Galilean transformation, Significance of Michelson-Morley experiment, Postulates of Special Theory of Relativity, Lorentz transformation, Spatial contraction, Time dilation, composition of velocities, mass of moving particle, Equivalence of mass and energy. Introductory concept of general theory of relativity.

Text Book: Modern Physics, Kenneth S Krane.

Concepts of modern Physics, Arthur Beiser

Module II

Atomic Spectroscopy

Historical introduction. Electrostatic spectrum.Types of spectra. Absorption and emission of light by atoms, quantum theory, early atom models – Bohr model, electron spin and magnetic moment, Exclusion principle, Stern-Gerlach experiment, Vector atom model, quantum numbers associated with vector atom models, Total angular momentum and LS coupling, fine structure of Sodium D lines, Zeeman effect, quantum mechanical explanation for anomalous Zeeman effect, Paschen-Back effect.

Text Book: Molecular structure and Spectroscopy, G Aruldas.

Concepts of modern Physics, Arthur Beiser

Module III

Molecular Spectroscopy

Molecular energy levels. Electronic, rotational and vibrational energies, rotational spectra, explanation in terms of rigid rotator model, vibrational energy levels, explanation in terms of harmonic oscillator.

Electronic energy levels of atoms, Fluorescence and phosphorescence, Raman effect – experimental arrangement and result, classical theory and its failure, quantum theory of Raman effect.

(18 hours)

Credit-3 (72 hours)

(21 hours)

(21 hours)

IR and Microwave spectroscopes.

Text Book: Fundamentals olf Molecular Spectroscopy, C.Banwell and E. Mccash. Molecular structure and Spectroscopy, G Aruldas.

NMR and ESR Spectroscopy

NMR Spectroscopy- Basic principles and instrumentation- Medical applications of NMR.

- Text Book: Molecular structure and Spectroscopy, G Aruldas Chapter 10 (Sections 10.1, 10.2,10.3 and 10.19).
- ESR Spectroscopy- Basic principles and instrumentation.
- Text Book: Molecular structure and Spectroscopy, G Aruldas Chapter 11 (Sections 11.1, 11.2 and 11.3).

Text Books:

- 1. Molecular structure and spectroscopy, Aruldas 2nd ed. EEE.
- 2. Modern Physics, Kenneth S Krane (2nd Edition) -Wiley.
- 3. Concepts of modern Physics, Arthur Beiser (6th Edition) SIE.

References:

- 3. Introduction to Atomic Spectra, HE White, TMH
- 4. Elements of spectroscopy, Guptha, Kumar and Sharma (Pragathi Prakash)
- 5. Special Relativity- Resnick, (Wiley)
- 6. Mechanics D.S.Mathur (S.Chand).
- 7. Mechanics by J.C. Upadhayaya (Ramprasad)
- 8. Semiconductor physics and optoelectronics- V Rajendran, J Hemaletha and M S M Gibson.

(12 hours)

Core Course: XI

PH6CRT11: NUCLEAR, PARTICLE PHYSICS AND ASTROPHYSICS

Module I

Nuclear structure

Nuclear composition – Discovery of neutron – Nuclear electrons - Nuclear properties: Nuclear radii – Spin and magnetic moment - Stable nuclei - Binding energy- Binding energy curve, Liquid drop model - Semi empirical binding energy formula with correction factors - Shell model - Nuclear forces- Meson theory of nuclear forces – Discovery of pion – Virtual Photons

Nuclear Radiation Detectors, Counters and Particle Accelerators (8 Hours)

Interactions between energetic particles and matter (basic concepts only) - Ionization chamber - Solid state detectors - Proportional counter - Geiger-Muller counter - The Wilson cloud chamber - Bubble chamber - Scintillation counters - Van de Graaff generator - Linear accelerator - Cyclotron - Betatron

Module II

Nuclear Transformations

Radioactive decay – Radiation hazards – Half life – Radiometric dating – Radioactive series - Alpha decay, tunnel theory of alpha decay, derivation for alpha decay constant - Beta decay, positron emission, electron capture, inverse beta decay – Gamma decay - The concept of interaction cross section, reaction rate – Nuclear reactions, Resonance, Center of mass coordinate system, Q value of nuclear reaction – Nuclear fission – Nuclear reactors – Breeder reactors - Nuclear fusion in stars – Formation of heavier elements – Fusion reactors – Confinement methods

Cosmic rays

Latitude effect – Azimuth effect – Altitude effect - Primary cosmic rays – Secondary cosmic rays – Cosmic ray showers – Discovery of Positron – Mesons Van Allen belts – Origin of cosmic rays

(10 hours)

Credit - 3 (54 hours)

(15 hours)

(4 hours)

Module III

Particle Physics

Interactions and Particles – Leptons – Neutrinos and Antineutrinos, other leptons – Hadrons – Resonance particles – Elementary particle quantum numbers – Basic concepts of symmetries and conservation principles – Basic concepts of Quarks – color, flavor, Quark confinement –Higgs boson

Astrophysics

Classification of stars – Hertzsprung - Russel diagram – Luminosity of a star – Stellar evolution - White Dwarfs - Chandrasekhar limit - Neutron stars - Black holes - Supernova explosion – Photon diffusion time.

Text Book:

- 1. Concepts of Modern Physics, Arthur Beiser, 6th Edition, Tata McGraw-Hill publishing company

- 4. Modern Physics, Kennth Krane, 2nd Edition, Wiley India (Pvt) Ltd.
- 5. Modern Physics , G. Aruldhas and P. Rajagopal, Prentice-Hall India
- 6. An Introduction to Astrophysics, Baidyanath Basu, 2nd Edition, Prentice-Hall India

(10 hours)

(7 hours)

Core Course: XII

PH6CRT12: SOLID STATE PHYSICS

Module I

Crystal structure

Solid state, crystalline, polycrystalline and amorphous materials, crystal lattice, periodicity, translation vectors, unit cell, basis, symmetry operations, Bravais lattice in two and three dimensions, miller indices, interplanar spacing, simple crystal structures-hcp, fcc, bcc and simple cubic, Structures of NaCl, Diamond and ZnS, X-ray diffraction from crystals- Bragg's law, powder method, reciprocal lattice-properties, reciprocal lattice to sc, bcc and fcc, Bragg's law in reciprocal lattice.

Text book: Solid State Physics by Puri and Babbar- Chapter 1 & 2

Module II

Bonding in solids

Inter-atomic forces, ionic bonding, bond dissociation and cohesive energy, Madelung energy, covalent bonding, metallic bonding, hydrogen bonding, van der Waals bonding (basic ideas only).

Text book: Solid State Physics by Puri and Babbar

Free electron theory and elementary band theory

Free electron gas in one dimension, three dimension, electronic specific heat, band theory, Bloch theorem, Kronig-Penney model (derivation not expected), energy-wave vector relations, different zone schemes, velocity and effective mass of electron, distinction between metals, insulators and semiconductors.

Semiconducting properties of materials

Intrinsic and extrinsic semiconductors, drift velocity, mobility and conductivity of intrinsic semiconductors, carrier concentration and Fermi level for intrinsic semiconductor, carrier concentration, conductivity and Fermi level for extrinsic semiconductor. Hall Effect, Direct and Indirect band gap, Principles of LED and Photodiodes.

Text book: Solid State Physics by Puri and Babbar Chapter 5, 6 and 7

Curriculum and syllabus 2017 admissions onwards

(18 hours)

(7 hours)

(12 hours)

(12 hours)

Module III

Dielectric properties of materials

Polarization and susceptibility, local filed, dielectric constant and polarizability, sources of polarizability, Clausius-Mossoti relation, piezoelectricity.

Magnetic properties of materials

Response of materials to magnetic field, classification of magnetic materials, Langevin's classical theory of diamagnetism and paramagnetism, ferromagnetism, Weiss theory, domain theory, antiferromagnetism and ferrimagnetism.

Superconductivity

Origin of superconductivity, response of magnetic field, Meissner effect, super current and penetration depth, critical field and critical temperature, type-I and type –II superconductors, thermodynamic and optical properties, isotope effect, Josephson effect and tunneling- SQUID BCS theory-Cooper pairs-Existence of bandgap.

Text book: Solid State Physics by Puri and Babbar Chapter 5, 6 and 7

Text book:

1. Solid State Physics by Puri and Babbar (S.Chand)

(5 hours)

(10 hours)

Choice Based Course – XIV-1 PH6CBT01: INFORMATION TECHNOLOGY

Scope: To learn about the fascinating world of information technology and to use the tools available in Internet and the World Wide Web for a deep study of the subjects related to physics in better way by the students themselves.

Prerequisites: Awareness of basic computer operations.

Module I

Information and its Use : Information Technology – Quality of information – Message transmission – Electronic Office – E mail – Document storage – Computers in Industry – Different types – Graphical user interface

Text book: "Information Technology – The Breaking Wave", D.Curtin, K.Sen and K.Morin, Tata McGraw Hill, 1999. Chapter – 1, 2

Computer Networks: Importance of Networks. Components of Networks. Classification of Networks: Broad cast networks-Switched networks. Switching Techniques. Types of Networks – LAN – MAN – WAN. Networking Models – OSI reference model – TCP/IP reference model-Comparison between the OSI and TCP/IP models. Network Topology – Bus- Star-Ring-Tree-Mesh-Cellular.

Text book: Computer Networks, A.S. Tanenbaum - Prentice Hall of India, Chapter - 1

Computer Fundamentals, P.K. Sinha 3rd Edn. BPB Publications, Chapter – 17

THE INTERNET: Internet Protocols – Internet Protocol (IP)-Transmission Control Protocol (TCP) -Internet Address – Structure of Internet Servers Address-Address Space- Services on Internet – Domain Name System-SMTP and Electronic mail – Http and World Wide Web-Usenet and News groups-FTP-Telnet-Network Security

-Digital Signature-E-mail Privacy-Internet Tools – Search Engines-Web browsers-Internet explorer, Netscape Navigator, Mozilla Firefox(Working Knowledge)

Text book: Computer Networks, A.S.Tanenbaum - Prentice Hall of India, Chapter –5, 6, 7

Computer Fundamentals, P.K. Sinha 3rd Edn. BPB Publications, Chapter – 18 Curriculum and syllabus 2017 admissions onwards

(20 hours)

Credit – 3 (54 hours)

Module – II

THE HTML: What is HTML? Basic Tags of HTML – HTML-TITLE-BODY - Starting an HTML document – The <!DOCTYPE>declaration-setting boundaries with <HTML>-the HEAD element-the BODY element-the STYLE element and the SCRIPT element. - Formatting of text– Headers-Formatting Tags-PRE tag-FONT tag-Special Characters. Working with Images- META tag -Links – Anchor Tag -Lists – Unordered Lists-Ordered Lists-Definition Lists -Tables –TABLE, TR and TD Tags-Cell Spacing and Cell Padding-Colspan and Rowspan -Frames –Frameset-FRAME Tag-NOFRAMES Tag - Forms – FORM and INPUT Tag-Text Box-Radio Button-Checkbox-SELECT Tag and Pull Down Lists-Hidden-Submit and Reset

Text book: HTML4 - 2nd Edn. Rick Darnell, Techmedia, Chapter - 1, 2,3,4,5

Module – III

Basic Idea of DBMS: Need for Data Base – Database Systems versus File systems - View of Data - Data Abstraction-Instances and Schemas - Data Models – ER Model-Relational Model- Network Model-Hierarchical Model (general ideas) -Basic ideas about Structured Query Language.

Text book: Fundaments of Database System – Elmasri, Ramez and Navathe Shamkant B. 4th Edn.Person Education, India, 2004. Chapter – 1

MS – OFFICE/OPEN OFFICE (Working Knowledge): Word processors – PowerPoint - Spreadsheets – Databases

(No specific text book is preferred. MS office (97, 98, 2000, /Open Office which is installed in the lab can be used. Working practice must be given)

Choice Based Course – XIV-2

PH6CBT02: MATERIAL SCIENCE

Module I

Structure and Properties of Materials

Classification of materials- Advance materials- Level of structures, Microstructure and Macrostructure, Structure-Property relationships, Physical properties of materials-Imperfections in solids- Point defects, imperfections, dislocations- interfacial and bulk defects. Diffusion Mechanisms- Fick's first and second laws. Mechanical Properties-Stress strain relationship, Basic ideas of anelasticity, plastic deformation, tensile properties, ductility, malleability, brittleness, toughness, resilience, hardness, stiffness, endurance, creep and impact strength- Basic Thermal properties, Thermal cracking-Electrical and Magnetic properties- Dielectric strength and dielectric constant- Basic ideas of Chemical properties

Text Book: Callister's Material Science Engineering-Adapted R and bv Balasubramaniam, Wiley

Module II

Optical Properties of Materials

Absorption processes- Fundamental absorption-Exciton absorption- Free –carrier absorption-Photoconductivity-Photoelectric effect-Photovoltaic effect-Photoluminescence-colour centres-Generation of colour centres

Text Book: Solid State Physics, M.A. Wahab, Chapter-15

Modern Engineering Materials

Display devices- active and passive-Liquid crystals- Types of Liquid crystals- Nematic liquid crystals-Cholesteric liquid crystals- Smectic liquid crystals-General features of liquid crystals- Numeric display using LCD

Metallic glasses; Shape memory alloy; lead free solders

Text Book: Semiconductor Physics and Optoelectronics, V.Rajendran et al. Unit-II

(18 hours)

(18 hours)

Credit-3 (54 hours)

Module III

(18 hours)

Nanoscience

Metal nanoclusters-magic numbers, theoretical modelling, geometric and electronic structure, magnetic clusters; Semiconducting nano particles- Rare gas and molecular clusters- carbon nanostructures- Carbon clusters, CNT preparation, properties and applications; Quantum wells, wires and dots – preparation, Size and dimensionality effects, applications.

Text Book: Modern Physics by Murugeshan

Material Characterization Techniques

Qualitative study of Powder XRD, SEM, SPM, TEM, STM, AFM, PES and Raman spectroscopy.

Text Book: Nanotechnology-The science of small- MA Shah and KA Shah, Chapter 5

Text Books:

- 1. Text Book: Callister's Material Science and Engineering-Adapted by R Balasubramaniam, Wiley
- 2. Solid State Physics (2nd ed.), M.A. Wahab, Narosa pub.
- 3. Nanotechnology-The science of small, MA Shah and KA Shah, Wiley.
- 4. Text Book: Modern Physics by Murugeshan
- 5. Semiconductor Physics and Optoelectronics, V.Rajendran et al., Vikas PublishingHouse.

- 4. Introduction to Nanotechnology, C.P Poole, F.J Owens Wiley
- 5. Textbook of Nanoscience and Nanotechnology, BS Murthy, P Shankar, Baldev Raj,BB Rath and J Murday- Universities Press-IIM

Choice Based Course – XIV-3

PH6CBT03: COMPUTATIONAL PHYSICS

Algorithms of all methods required

Module I

Solutions of Nonlinear Equations

Bisection Method - Newton Raphson method (two equation solution) – Regula-Falsi Method, Secant method - Fixed point iteration method - Rate of convergence and comparisons of these Methods

Solution of system of linear algebraic equations

Gauss elimination method with pivoting strategies-Gauss-Jordan method-LU Factorization, Iterative methods (Jacobi method, Gauss-Seidel method)

Module II

Curve fitting: Regression and interpolation

Least squares Regression- fitting a straight line, parabola, polynomial and exponential curve

Finite difference operators-forward differences, divided difference; shift, average and differential operators- Newton's forward difference interpolation formulae- Lagrange interpolation polynomial- Newton's divided difference interpolation polynomial

Module III

Numerical Differentiation and Integration

Numerical Differentiation formulae - Maxima and minima of a tabulated function- Newton-Cote general quadrature formula - Trapezoidal, Simpson's 1/3, 3/8 rule –

Solution of ordinary differential equations

Taylor Series Method, Picard's method-Euler's and modified Euler's method –Heun's method- Runge Kutta methods for 1st and 2nd order

Text Books:

- 1. Numerical Methods, Balagurusamy, TMH
- 2. Numerical Methods for Scientists and Engineers- K Sankara Rao- PHI
- 3. Introductory Numerical Methods, S S Sastry, PHI.

Curriculum and syllabus 2017 admissions onwards

(18 hours)

Credit-3 (54 hours)

(18 hours)

(18 hours)

Choice Based Course – XIV-IV

PH6CBT04: INSTRUMENTATION

Module I

Measurements and Measurement Systems

Measurements-Method of measurement-Instruments and measurement systems-Mechanical, Electrical and Electronic instruments-Classification of Instruments-Applications of Measurement Systems - Elements of generalized measurement systems

Text book: A Course in Electrical and Electronics Measurements and Instrumentation, Sawhney. A.K- Chapter 1

Module II

Primary Sensing Elements and Transducers

Mechanical Devices as Primary Detectors – Mechanical Spring Devices – Pressure Sensitive Primary Devices – Flow Rate Sensing Elements - Transducers-Classification– Characteristics (Static and Dynamic) and Choice of Transducers – Characterization

Text book: Sensors and Transducers, Patranabis D., Chapter 1

A Course in Electrical and Electronics Measurements and Instrumentation, Sawhney. A.K- Chapter 25

Module III

Resistive,Inductive and Capacitive Transducers

Potentiometers –Strain gauges (Theory, types) - Rosettes – Resistance thermometer – Thermistors (materials, Constructions, Characteristics) – Thermocouples-Self inductive transducer – Mutual inductive transducers – Linear Variable Differential Transformer – LVDT Accelerometer – RVDT – Synchros – Capacitive transducer – Variable Area Type – Variable Air Gap type – Variable Permittivity type – Capacitor microphone.

Miscellaneous Transducers

Light transducers (photo-conductive, photo emissive, photo-voltaic, semiconductor, LDR)–Piezoelectric transducer – Hall Effect transducers – Digital Encoding transducers

Text book: A Course in Electrical and Electronics Measurements and Instrumentation, Sawhney. A.K- Chapter 1 and 25

(10 hours)

(18 hours)

Credit – 3 (54 hours)

(18 hours)

(8 hours)

Text books:

- 1. A Course in Electrical and Electronics Measurements and Instrumentation, Sawhney A.K, 18th Edition, Dhanpat Rai & Company Private Limited, 2007.
- 2. Sensors and Transducers, Patranabis D., 2nd edition, PHI, 2015.

- 6. Electronic Instrumentation by H.S Kalsi, McGrawHill
- 7. Instrumentation measurements and analysis, Nakra & Choudhary, Tata-McGrawHill
- 8. Mechanical and industrial measurement by R.K. Jain, Khanna Publishers, New Delhi

Choice Based Course – XIV-V

PH6CBT05: Astronomy and Astrophysics

Module I

Observational astronomy

Astronomical distance scales – AU, Parsec and light year. Stellar Parallax and distance to stars from parallax. Magnitude scale - Apparent and absolute magnitudes. Variable stars as distance indicators. Cepheid variables. Astronomy in different bands of electromagnetic radiation- Optical, radio and X-ray astronomies, Radiation Laws.

Optical Telescopes.Types of telescopes-refracting and reflecting – Newtonian and Cassegrain telescopes. Magnification and f number. Resolving Power, Telescope mounts

- alt-azimuth and equatorial mounts.

Text Book : K D Abhyankar Section 3.1 & 4.3, Ian Morison Chapter 5, Dinah L. Moché, Chapter 2 & 3.

Module II

Celestial sphere

Concept of celestial sphere - cardinal points, celestial equator, ecliptic, equinoxes.Diurnal motion of sun - summer solstice and winter solstice. Celestial co-ordinate systems: – Horizon system – Azimuth & Altitude, Equatorial system-Right ascension & declination, Ecliptic coordinate system.

Time - apparent and mean solar time, sidereal time. Twilight, Seasons- causes of seasons (qualitative ideas).International Date Line.

Text Book: K D Abhyankar, Chapter 2 & Dinah L. Moché, Chapter 1

Sun

Sun - solar atmosphere and internal structure – Photosphere, chromosphere and corona. Radiation zone & Convection Zone. Sun spots, Activity Cycles, flares, prominences, coronal holes, Solar wind.

Text Book: Dinah L. Moché, Chapter 4, Ian Morison Chapter 2

Galaxies

Galaxies - our galaxy, galaxy types & turning fork diagram. Structure on the largest scaleclusters, super clusters and voids.

(12 Hours)

Credit – 3 (54 hours)

(8 Hours)

(5 Hours)

(3 hours)

Text Book: Dinah L. Moché, Chapter 6

Module III

Astrophysics

(14 hours)

Gravitational contraction - Virial theorem, Jeans mass. Energy production inside stars. Thermonuclear fusion. Hydrogen burning. p-p chain. CNO cycle. Evolution of stars – birth – protostar, hydrostatic equilibrium, red giant, late stages of evolution - white dwarfs & Chandrasekhar limit, Neutron stars, Supernovae, Pulsars, Black holes. Stellar Classification, H-R diagram - Main sequence stars

Text Book: K D Abhyankar, Chapter 10, Dinah L. Moché Chapter 5

Cosmology (12 hours)

Large scale structure of the universe – isotropy and homogeneity. Cosmological principle.

Standard big bang model - GUT, Planck Epoch, Inflation, Nucleosynthesis, Recombination & CMBR. Expanding universe - red shift. Hubble's law and Hubble parameter. Age of universe and its determination. Dark energy and Dark Matter (qualitative idea).

Text Book: Dinah L. Moché Chapter 7 & Ian Morison Chapter 9

B. Sc. PHYSICS PRACTICAL

Minimum of experiments to be done in each paper is 14.

Minimum number of experiments for appearing practical examination is 8.

Maximum possible number of repetitions must be done to reduce error in a measuring quantity.

Do calculation of percentage error for all experiments.

The S.I. units must be specified along with the results.

Division of internal marks for record (maximum 4 marks)

No. of Experiments	Marks
14 and above	4
12 & 13	3
10 & 11	2
8,9 & 10	1
Less than 8	0

SEMESTER	PAPER	PAPER CODE	TITLE
1 & 2	01	PH2CRP01	Mechanics and Properties of Matter
3 & 4	02	PH4CRP02	Optics and Semiconductor Physics
5&6	03	PH6CRP03	Electricity, Magnetism and LASER
5&6	04	PH6CRP04	Digital Electronics
5&6	05	PH6CRP05	Thermal Physics, Spectroscopy and C++ Programming
5&6	06	PH6CRP06	Acoustics, Photonics and Advanced Semiconductor Physics

Curriculum and syllabus 2017 admissions onwards

SEMESTER 1&2 (First Year)

Core Practical 1: PH2CRP01 – Mechanics and Properties of Matter

- Symmetric Compound Pendulum Determination of acceleration due to gravity (g), radius of gyration(K) and moment of inertia (I)
- Asymmetric Compound Pendulum Determination of acceleration due to gravity (g), radius of gyration(K) and moment of inertia (I)
- 3. Kater's pendulum Determination of acceleration due to gravity (g)
- Torsion Pendulum Determination of rigidity modulus (n) and moment of inertia (I)
- Torsion Pendulum (Method of equal masses) Determination of rigidity modulus (n) and moment of inertia (I)
- 6. Measurement of density of a solid Sensibility method to find mass using beam balance and screw gauge / venier calipers for dimension measurements
- 7. Uniform bending Pin and Microscope Determination of Young's modulus
- 8. Non Uniform bending Pin and Microscope Determination of Young's modulus
- 9. Uniform bending Optic Lever Determination of Young's modulus
- 10. Non Uniform bending Optic Lever Determination of Young's modulus
- 11. Cantilever Scale and telescope Determination of Young's modulus
- 12. Cantilever Pin and Microscope Determination of Young's modulus
- 13. Vertical oscillations of a spring Determination of Young's modulus
- 14. One dimensional elastic collision Hanging sphere method Law of conservation of energy and momentum
- 15. Static Torsion Determination of rigidity modulus
- 16. Flywheel Determination of moment of inertia
- 17. Constant pressure head Determination of viscosity of a liquid
- 18. Variable pressure head Determination of viscosity of a liquid
- 19. Stokes's method Determination of viscosity of a liquid
- 20. Capillary rise method Determination of surface tension
- 21. Quincke's method Determination of surface tension

SEMESTER 3&4 (Second Year)

Core Practical 02: PH4CRP02 –Optics and Semiconductor Physics

- 1. Liquid Lens Determination of optical constants of a convex lens water and mercury given
- Liquid Lens Determination of refractive index of a liquid water and unknown liquid
- 3. Spectrometer Prism Determination of refractive index of material of the prism
- 4. Spectrometer Hollow Prism Determination of refractive index of liquid
- Spectrometer Small angled prism Normal incidence Determination of refractive index of material of the prism
- Spectrometer i d curve Determination of refractive index of material of the prism
- 7. Newton's rings Determination of wavelength of sodium light
- 8. The air wedge Determination of diameter of thin wire
- Zener characteristics forward and reverse Study of dynamic and static properties
- 10. Transistor characteristics Common Emitter Configuration
- 11. Half wave rectifier Study of ripple factor and load regulation with and without filter circuit
- 12. Full wave rectifier (center tap) Study of ripple factor and load regulation with and without filter circuit
- 13. Full wave rectifier (bridge) Study of ripple factor and load regulation with and without filter circuit
- 14. FET characteristics Determination of parameters
- 15. Voltage regulator using zener diode Study of line and load regulations
- 16. Clippers positive, negative and biased Study of output waveforms
- 17. Clampers positive, negative and biased Study of output waveforms
- 18. OPAMP characteristics Study of CMRR and open loop gain
- 19. OPAMP inverter, non inverter and buffer Study of gain
- 20. LC Oscillator Colpit's /Hartley using transistor
- 21. Phase shift oscillator using transistor

Core Practical 03: PH6CRP03 – Electricity, Magnetism and LASER

- 1. Potentiometer Measurement of resistance of wire
- 2. Potentiometer Calibration of low range voltmeter
- 3. Potentiometer Calibration of high range voltmeter
- 4. Potentiometer Calibration of ammeter
- 5. Tangent galvanometer Calibration of ammeter
- 6. Moving coil galvanometer figure of merit
- 7. Conversion of galvanometer into voltmeter
- 8. Conversion of galvanometer into ammeter
- 9. Field along the axis of a circular coil magnetic flux variation
- 10. Field along the axis of a circular coil m and Bh
- 11. Searle's vibration magnetometer magnetic moment
- 12. Deflection and vibration magnetometer m and Bh
- 13. Carey Foster's bridge Measurement of resistivity of wire
- 14. LCR seriesand parallel resonant circuit analysis
- 15. Verification of Thevenin's and Norton's theorems
- 16. Verification of Superposition and Maximum power transfer theorems.
- 17. Laser Grating Determination of wavelength
- 18. Laser Determination of spot size and divergence
- 19. Optical fiber Determination of numerical aperture
- 20. Single slit diffraction using laser Determination of slit width
- 21. e/m Thomson's apparatus Bar magnet/magnetic focusing
- 22. Determination of Dielectric constant of a thin sheet/ a liquid

Curriculum and syllabus 2017 admissions onwards

Core Practical 04: PH6CRP04 – Digital Electronics

- 1. Realization of logic gates AND, OR and NOT Using diodes, transistors etc.
- 2. Realization of logic gates AND, OR and NOT Using universal gates
- 3. Verification of truth table of NAND, NOR, XOR and XNOR gates
- 4. Verification of De Morgan's theorems Using IC 7400
- 5. BCD to 7 segment decoder
- 6. Realization of Half adder/ Full adder using gates Verification of truth table
- 7. Astable Multivibrator using Transistor
- 8. Astable Multivibrator using IC 555
- 9. Monostable Multivibrator using Transistor
- 10. Monostable Multivibrator using IC 555
- 11. D/A converter using IC 741 Using binary weighed resistor / R 2R ladder type
- 12. A/D converter using IC 741
- 13. SR Flip Flops using IC 7400 Verification of truth table
- 14. JK Flip Flops using IC 7400 & 7410 Verification of truth table
- 15. Digital counter using IC 7490 / 7495 / 74194 / 74151 Verification of truth table
- 16. Schmitt trigger using IC 741
- 17. Bistable multivibrator using IC 555
- 18. Multiplexer using gates
- 19. Demultiplexer using gates
- 20. Shift register SISO
- 21. Shift register SIPO
- 22. 4-Bit Binary to Gray conversion
- 23. 4-Bit Gray to Binary conversion

Core Practical 05: PH6CRP05 – Thermal Physics, Spectroscopy and C++ Programming

- 1. Thermistor Resistance Temperature characteristics and temperature coefficient of resistance
- 2. Newton's law of cooling Specific heat capacity of a liquid
- 3. Thermal conductivity of bad conductor Lee's disc
- 4. Carey Foster's bridge Temperature co-efficient of resistance
- 5. Study of Seeback effect/Peltier effect
- 6. Electrochemical equivalent of Copper
- 7. To determine e/k using transistor
- 8. Spectrometer Cauchy's constants
- 9. Spectrometer Resolving power of a prism.
- 10. Spectrometer Resolving power of grating.
- 11. Spectrometer Dispersive power of grating
- 12. Spectrometer Dispersive power of prism
- 13. Computer programming in C++ Conversion of temperature scale
- 14. Computer programming in C++ Solving a quadratic equation
- 15. Computer programming in C++ Generation of Fibonacci series
- 16. Computer programming in C++ Conversion of a decimal number into binary number
- 17. Computer programming in C++ Simple Pendulum Calculation of 'g' from experimental data
- 18. Computer programming in C++ Resistance colour code to numerical value conversion
- 19. Computer programming in C++ For different initial velocity and angle of projection, find out time of flight, horizontal range, Maximum height of a Projectile
- 20. Computer programming in C++ sorting the numbers in ascending and descending order
- 21. Computer programming in C++ multiplication of two matrices

Curriculum and syllabus 2017 admissions onwards

Core Practical 06: PH6CRP06 – Acoustics, Photonics and Advanced Semiconductor Physics

- 1. Melde's string Determination of frequency of given tuning fork
- 2. Sonometer Determination of frequency of AC
- 3. Sonometer Determination of frequency of given tuning fork, unknown mass and verification of laws of strings
- 4. Kundt's tube Determination of velocity of sound
- 5. Spectrometer Quartz prism Refractive indices of quartz for the ordinary and extra –ordinary rays
- 6. Characteristics of LED V- I characteristic for different colors
- 7. Characteristics of solar cell / photodiode V- I characteristics
- 8. Characteristics of Light Depend Resistors
- 9. Planck's constant using LED's of at least 3 different colours
- 10. Weinbridge Oscillator using IC 741
- 11. Realization of XOR and Ex NOR using transistor
- 12. Sweep wave generator using transistor
- 13. Regulated power supply using zener diode and IC 741 Study of line and load regulations
- 14. Regulated power supply using IC 78XX/79XX etc Study of line and load regulations
- 15. Voltage regulator using zener diode and transistor Study of line and load regulations
- 16. RC coupled common emitter amplifier Study of frequency response and bandwidth
- 17. Voltage multipliers doubler & tripler
- 18. Wave shaping R C circuits Integrator and differentiator
- 19. OPAMP adder and subtractor
- 20. Amplitude modulation using transistor
- 21. Pulse Width Modulation using IC 555

9. COMPLEMENTARY PHYSICS FOR MATHEMATICS AND STATISTICS

Semester I 2 credits (36 hours) PH1CMT01: PROPERTIES OF MATTER & ERROR ANALYSIS

Module I Elasticity

Stress- strain- Hooke's law- Elastic moduli- Poisson's ratio- twisting coupledetermination of rigidity modulus- static and dynamic methods- static torsion- torsion pendulum, bending of beams- cantilever, uniform and non-uniform bending, I section girder.

Module II

Surface tension

Molecular theory of surface tension - surface energy - excess pressure in a liquid drop, factors affecting surface tension - applications

Hydrodynamics

Streamline and turbulent flow - critical velocity - Coefficient of viscosity - Derivation of Poiseuille's equation, Stokes equation-Determination of viscosity by Poiseuille's method -Brownian motion - Viscosity of gases - Bernoulli's theorem.

Module III

Error Analysis

Basic ideas – uncertainties of measurement – importance of estimating errors – dominant errors - random errors - systematic errors - rejection of spurious measurements. Estimating and reporting errors – errors with reading scales, errors of digital instruments - number of significant digits - absolute and relative errors - standard deviation. Propagation of errors – sum and differences – products and quotients – multiplying by constants - powers

References:

- 2. Advanced course in Practical Physics by D Chattopadhyay
- 3. Properties of Matter- Brijlal and N. Subrahmanyam (S. Chand and Co.)
- 4. Concepts of Modern Physics- A. Beiser (Tata McGraw-Hill, 5th Edn.)
- 5. Modern Physics- G. Aruldas and P. Rajagopal (PHI Pub)
- 6. Physics- Resnick and Halliday
- 7. An Introduction to Error Analysis: The Study of Uncertainties in Physical Measurements, John R. Taylor - Univ. Science Books

Curriculum and syllabus 2017 admissions onwards

(13 hours)

(7 hours)

(13 hours)

(3 hours)

Module I

Semester II

Motion under Gravity

Velocity- acceleration- force – acceleration due to gravity - compound pendulum (symmetric and asymmetric) radius of gyration – Kater's Pendulum- centripetal acceleration and force - centrifugal force

Rotational Dynamics

Angular velocity- angular momentum- torque- conservation of angular momentumangular acceleration- moment of inertia- parallel and perpendicular axes theoremsmoment of inertia of rod, ring, disc, cylinder and sphere- flywheel

Module II

Oscillations

Periodic and oscillatory motion- simple harmonic motion- differential equation, expression for displacement, velocity and acceleration- graphical representation- energy of a particle executing simple harmonic motion - damped oscillation- forced oscillation and resonance.

Waves

Waves-classifications- progressive wave- energy of progressive wave- superposition of waves-theory of beats- Doppler Effect.

Module III

Astrophysics

Temperature and color of a star- elements present in a stellar atmosphere- mass of starlife time of a star- main sequence stars-HR diagram- evolution of stars- white dwarfsupernova explosion- neutron star- black hole- (all topics to be treated qualitatively)

References

- 1. Elements of properties of matter, D S Mathur Mechanics- H.S.Hans and S.P.Puri. (TMH)
- 2. Mechanics, D S Mathur
- 3. Modern Physics- R. Murugeshan, Er. Kirthiga Sivaprasad

Curriculum and syllabus 2017 admissions onwards

B Sc Programme in Physics, Mahatma Gandhi University

tions

(4 hours)

(8 hours)

2 credits (36 hours)

82

(10 hours)

(5 hours)

(9 hours)

- 4. A text book on oscillations waves and acoustics, M.Ghosh , D Bhattacharya
- 5. Introduction to Astrophysics-Baidyanath Basu.
- 6. Mechanics by D.S. Mathur and P.S. Hemne, S. Chand.
- 7. Waves, Mechanics & Oscillations- S B Puri

Semester III

PH3CMT01: MODERN PHYSICS AND ELECTRONICS

Module I

Modern Physics

Basic features of Bohr atom model-formula for energy- vector atom model- various quantum numbers-coupling schemes – LS & JJ-Pauli's exclusion principle- magnetic moments of orbital electrons

Atomic nucleus-classification-basic properties of nucleus-charge, mass, spin, magnetic moment binding energy and packing fraction-nuclear forces-salient features

Radioactivity- properties of alpha, beta and gamma-Soddy Fajan's displacement law, law of radioactive disintegration-decay constant-half life and mean life-radioactive equilibrium - measurement of radioactivity-radio carbon dating

Module II

Quantum Mechanics

Inadequacies of classical physics-experimental evidences-evidences for quantum theory-Planck's hypothesis-foundation of quantum mechanics-wave function & probability density- Schrödinger equation-time dependent and time independent particle in a potential box.

Spectroscopy

Optical spectra- spectral terms, selection rules, hyperfine structure; molecular spectrarotational, vibrational and electronic spectra; Raman effect- experimental study, quantum theory; fluorescence and phosphorescence; comparison of Raman, fluorescence and IR spectra; NMR

(6 hours)

(12 hours)

(18 hours)

3 credits (54 hours)

Module III

Electronics

Current-voltage characteristics of a diode-forward and reverse bias-breakdown mechanism of p-n junction diode-Zener diode and its characteristics-half wave and full wave rectifiers- bridge rectifier-ripple factor, efficiency. Bipolar junction transistor-Construction and operation.

Module IV

Digital Electronics

Different number systems – decimal, binary, octal, hexa decimal number systemsconversion between different number systems- binary mathematics – addition, subtraction (1's compliment and 2's compliment methods) - basic theorems of Boolean algebra- de Morgan's theorems – Simplification of Boolean equations - AND, OR, NOT, NAND, NOR, XOR gates- truth tables- half adder- full adder

References

- 1. Modern Physics- R. Murugeshan, Er. Kirthiga Sivaprasad
- 2. Principles of electronics, V K Mehta
- 3. Digital principles and applications- A. P. Malvino and P. Leach
- 4. Concepts of Modern Physics: Arthur Beiser (TMH).
- 5. Basic Electronics , B L Thereja (S. Chand)

Semester IV

PH4CMT01: OPTICS & ELECTRICITY

Module I

Interference, Diffraction and Polarization

Light waves- phase difference and coherence, optical path and phase change, principle of superposition, Analytical treatment of interference-young's double slit experiment, conditions for interference, bandwidth - Interference in thin films-reflected system-colour of thin films-fringes of equal inclination and equal thickness. Newton's rings-reflected system-measurement of wavelength

Curriculum and syllabus 2017 admissions onwards

3 credits (54 hours)

(10 hours)

(22 hours)

Fresnel and Fraunhofer diffractions.Fresnel's theory of approximate rectilinear propagation of light-.Fraunhofer diffraction.Theory of Plane transmission grating-determination of wavelength-dispersive power of grating. Prism and grating spectra, resolving power, Rayleigh criterion, resolving power of grating,

Polarization, types of polarization, Brewster's law, dichroism, birefringence – e ray and oray, polarizer and analyser, Malu's law, optical activity

Module II

Laser and Fiber Optics

Principle of operation of laser-population inversion, metastable states, optical resonatorcomponents of laser- active medium, pump, optical resonant cavity- principal pumping schemes- three level and four level- laser beam characteristics applications of lasers. Light propagation in optical fibers, acceptance angle, numerical aperture-step index fiber - graded index fiber.

Module III

Dielectrics

Dielectrics- polar and non-polar dielectrics- polarization- sources of polarization-Gauss's law in dielectrics- permittivity- dielectric displacement vector- dielectric constant-susceptibility- ferro-electricity.

Module IV

Varying Currents

Transient currents – Growth and decay of current in an inductive circuit – charging and discharging of a capacitor through a resistance - Peak, mean, rms and effective values of a.c, Ac circuits-AC through RC, LC, LR and LCR series circuits resonance-sharpness of resonance-power factor.

10. COMPLEMENTARY PHYSICS FOR CHEMISTRY AND GEOLOGY

Semester 1

PH1CMT02: PROPERTIES OF MATTER AND THERMODYNAMICS

Module I

Elasticity

Stress- strain- Hooke's law- Elastic moduli- Poisson's ratio- twisting coupledetermination of rigidity modulus- static and dynamic methods- static torsion- torsion pendulum, bending of beams- cantilever, uniform and non-uniform bending, I section girder.

Module II

Surface tension

Molecular theory of surface tension - surface energy - excess pressure in a liquid drop, factors affecting surface tension - applications

Hydrodynamics

Streamline and turbulent flow - critical velocity - Coefficient of viscosity - Derivation of Poiseuille's equation, Stokes equation-Determination of viscosity by Poiseuille's method - Brownian motion – Viscosity of gases- Bernoulli's theorem.

Text Book: Elements of properties of matter, D S Mathur, Chapter- 14

Module III

Thermodynamics

Thermodynamic systems- thermodynamic equilibrium- thermodynamic processeisothermal process- adiabatic process- zeroth law of thermodynamics, first law of thermodynamics- heat engine- the Carnot engine- refrigerator, concept of entropysecond law of thermodynamics- third law of thermodynamics- Maxwell's thermodynamic relations

Text Books:

- 1. Elements of properties of matter, D S Mathur- S Chand
- 2. Heat and Thermodynamics-Brijlal & Subrahmanyam (S.Chand)

(13 hours)

(13 hours)

(7 hours)

(3 hours)

References

- 1. Mechanics H.S.Hans and S.P.Puri. (Tata McGraw-Hill)
- 2. Properties of Matter Brijlal and N. Subrahmanyam (S. Chand and Co.)
- 3. Mechanics J.C. Upadhyaya (Ram Prasad and sons)
- 4. Heat and Thermodynamics Mark W Zemanski (Tata McGraw-Hill)

Semester 2

PH2CMT02: MECHANICS AND SUPERCONDUCTIVITY

Module I

Motion under gravity

Velocity- acceleration- force – acceleration due to gravity - compound pendulum (symmetric and asymmetric) radius of gyration –centripetal acceleration and force - centrifugal force

Rotational dynamics

Angular velocity- angular momentum- torque- conservation of angular momentumangular acceleration- moment of inertia- parallel and perpendicular axes theoremsmoment of inertia of rod, ring, disc, cylinder and sphere- flywheel

Module II

Oscillations

Periodic and oscillatory motion- simple harmonic motion- differential equation, expression for displacement, velocity and acceleration- graphical representation- energy of a particle executing simple harmonic motion damped oscillation- forced oscillation and resonance.

Waves

Waves-classifications- progressive wave- energy of progressive wave- superposition of waves-theory of beats- Doppler effect.

(9 hours)

(4 hours)

(5 hours)

(10 hours)

Module III

Superconductivity

Super conducting phenomenon- Occurrence- BCS theory (qualitative) Meissner Effect-Type I and Type II superconductors- Josephson effects (qualitative) - High temperature superconductors- Applications of Superconductivity

Text Books:

- 1. Elements of properties of matter, D S Mathur- S Chand
- 2. Mechanics- D S Mathur- S Chand
- 3. Solid State Physics- P K Palanisamy- Scitech

References

- 1. Properties of Matter- Brijlal and N. Subrahmanyam (S. Chand and Co.)
- 2. A text book on oscillations waves and acoustics, M.Ghosh, D Bhattacharya
- 3. Solid State Physics- R. K. Puri and V.K. Babbar (S. Chand and Co.)
- 4. Elementary Solid State Physics, Ali Omar
- 5. Modern Physics- Murugeshan- S Chand

Semester III

PH3CMT02: MODERN PHYSICS AND MAGNETISM

Module I

Modern Physics

Basic features of Bohr atom model-formula for energy-vector atom model- various quantum numbers- Coupling schemes-LS and JJ coupling-Pauli's exclusion principle-magnetic moment of orbital electrons,

Atomic nucleus classification-basic properties of nucleus-charge, mass, spin, magnetic moment binding energy and packing fraction-nuclear forces-salient features

Radioactivity- properties of alpha, beta and gamma- Soddy Fajan's displacement law, law of radioactive disintegration -decay constant-half life and mean life-radioactive equilibrium - measurement of radioactivity-.Radio carbon dating

(18 hours)

(8 hours)

Module II

Quantum Mechanics

Inadequacies of classical physics-experimental evidences-evidences for quantum theory-Planck's hypothesis-foundation of quantum mechanics-wave function & probability density- Schrödinger equation-time dependent and time independent particle in a potential box.

Spectroscopy

Optical spectra- spectral terms, selection rules, hyperfine structure; molecular spectrarotational, vibrational and electronic spectra; Raman effect- experimental study, quantum theory; fluorescence and phosphorescence; comparison of Raman, fluorescence and IR spectra; NMR

Module III

Electronics

Current-voltage characteristics of a diode-forward and reverse bias-breakdown mechanism of p-n junction diode-Zener diode and its characteristics-half wave and full wave rectifiers- bridge rectifier-ripple factor, efficiency. Construction and operation of a bipolar junction transistor

Module IV

Magnetism

Properties of magnetic materials, Paramagnetism, Diamagnetism, Ferromagnetism, Hysteresis, Ferrites, Magnetostriction, Earth's magnetism-elements of earth's magnetismdip, declination, horizontal and vertical components-magnetic maps- magnetographscause of earth's magnetism

Text Books:

- 1. Modern Physics- R. Murugeshan, Er. Kirthiga Sivaprasad . S Chand
- 2. Principles of electronics, V K Mehta, S Chand
- 3. Electricity and magnetism, D C Tayal,

References

- 1. Functional Electronics, Ramanan (Tata McGraw-Hill)
- 2. Electricity and magnetism Brijlal and N. Subrahmanyam (S. Chand and Co.)

(6 hours)

(12 hours)

(8 hours)

(10 hours)

Semester IV

PH4CMT02: OPTICS AND SOLID STATE PHYSICS

Module I

Interference, Diffraction and Polarization

Light waves- phase difference and coherence, optical path and phase change, principle of superposition, Analytical treatment of interference-- young's double slit experiment, conditions for interference, bandwidth Interference in thin films-reflected system-colour of thin films-fringes of equal inclination and equal thickness. Newton's rings-reflected system-measurement of wavelength

Fresnel and Fraunhofer diffractions.Fresnel's theory of approximate rectilinear propagation of light. Fraunhofer diffraction.Theory of Plane transmission grating-determination of wavelength- dispersive power of grating. Prism and grating spectra, resolving power, Rayleigh criterion, resolving power of grating,

Polarization, types of polarization, Brewster's law, dichroism, birefringence – e ray and oray, polarizer and analyzer, Malu's law, optical activity

Module II

Laser and Fiber Optics

Principle of operation of laser-population inversion, metastable states, optical resonatorcomponents of laser- active medium, pump, optical resonant cavity- principal pumping schemes- three level and four level- laser beam characteristics, applications of lasers. Light propagation in optical fibers, acceptance angle, numerical aperture-step index fiber - graded index fiber.

Module III

Dielectrics

Dielectrics- polar and non-polar dielectrics- polarization- sources of polarization-Gauss's law in dielectrics- permittivity- dielectric displacement vector- dielectric constant-susceptibility- ferro-electricity.

(10 hours)

(10 hours)

(22 hours)

Module IV

Crystallography

(12 hours)

Crystal structure-crystal lattice and translation vectors-unit cell-types of lattices- Miller indices- lattice directions and planes interplanar spacing-simple crystal structures- sc, fcc, bcc, hcp close packed structures- -sodium chloride structure. X-ray crystallography-diffraction of x-rays-Bragg's law

Text Books:

- 1. Optics Brijlal and N. Subrahmanyam S Chand-2015
- 2. Electricity and Magnetism , D C Tayal
- 3. Solid State Physics, S O Pillai

References:

- 1. A text book of Applied Physics A .K Jha
- 2. Electricity and Magnetism R. Murugeshan (S Chand & Co.)
- 3. Solid state physics, P. K Palanisami
- 4. Lasers theory & applications- Thyagarajan & Ghatak

COMPLEMENTARY PHYSICS PRACTICALS

Semester I & II

Complementary Physics Practical 1: PH2CMP01

- 1. Vernier Calipers -- Volume of cylinder (solid and hollow), sphere and beaker
- 2. Screw gauge Radius of wire, volume of sphere and glass piece
- 3. Beam balance Mass of a solid (sensibility method)
- 4. Spectrometer Refractive Index of material of prism.
- 5. Diode characteristics- ac and dc resistance
- 6. Coefficient of viscosity of the liquid Constant OR Variable pressure head method
- 7. Surface Tension Capillary rise method
- Determination of Young's Modulus- Cantilever (Scale and Telescope)
 OR Uniform bending (Optic lever method)
 OR- Non-uniform bending (Pin and Microscope method)
- 9. Acceleration due to gravity (g)- Symmetric Compound Pendulum

OR Kater's pendulum

- 10. Symmetric Compound Pendulum Determination of Radius of gyration and moment of inertia
- 11. Fly wheel Moment of Inertia
- 12. Torsion pendulum -Rigidity modulus
- **13.** Determination of moment of inertia of rotationally symmetric body (solid sphere **OR** cylinder **OR** disc) from their period of oscillation on a torsion axle
- 14. Spring constant Hooke's law oscillation
- 15. Resistivity of the material of the wire- Ohm's law and verification by multimeter
- 16. Construction of half wave rectifier with and without filter Ripple factor
- 17. Laser- Transmission OR Reflection Grating- Determination of wavelength
- 18. Liquid lens Refractive Index of glass using a liquid of known refractive index
- 19. Poisson's ratio of rubber
- 20. Temperature dependence of capacitance- polymer and ceramic capacitors
- 21. Resistance of a galvanometer and its figure of merit.

Curriculum and syllabus 2017 admissions onwards

Semester III & IV: Complementary Physics Practical 2: PH4CMP02

- Determination of Young's Modulus- Cantilever (Pin & Microscope)
 OR Uniform bending (pin and microscope)OR Non-uniform bending (optic lever)
- 2. Asymmetric Compound Pendulum- Determination of moment of inertia and Acceleration due to gravity (g)
- 3. Torsion pendulum (Equal mass method) Rigidity modulus and Moment of Inertia
- 4. Spectrometer Dispersive power of prism
- 5. Spectrometer Dispersive power of a Grating
- 6. Newton's rings -Wave length
- 7. Characteristics of Zener diode- ac and dc resistance
- 8. Conversion of Galvanometer into voltmeter
- 9. Carey Foster's Bridge -Measurement of resistivity
- 10. Tangent Galvanometer Ammeter calibration
- 11. Potentiometer-Calibration of low range ammeter OR voltmeter
- 12. Construction of full wave rectifier (center-tap **OR** bridge) with and without filter Ripple factor
- 13. Construction of regulated power supply using Zener diode- line and load regulation
- 14. Laser diffraction- width of single slit OR thickness of wire
- 15. Refractive index of liquid- Liquid Lens OR Spectrometer and Hollow Prism
- 16. Air wedge-thickness of wire
- 17. Static Torsion Rigidity modulus
- 18. Deflection and Vibration Magnetometer-m & Bh
- 19. Field along the axis of circular coil- determination of Bh
- 20. Searle's Vibration Magnetometer magnetic moment
- 21. Gates AND, OR, NOT- verification of truth tables
